

LINKEDIN CLONE using DJANGO - Project updates:

29th April:

Started the project with 1st app called lprofile.

Made login/out/register views, along with respective templates and urls.

30th April:

Basic post creation feature added, only text posts for now.

1st May:

Addition of like and dislike features to posts.

2nd May:

Started with profile view and displaying proper message if profile/user does not exist.

Incomplete.

3rd May:

Made post deletion button, visible only to post owner.

Also made basic connection page. Yet to add functional connect/remove buttons.

4th May:

Nothing done.

5th May:

Improved like/dislike logic in respective views.

Improved profile view, with addition of first name and last name attributes during sign in, apart from already present standard username/email and password.

6th May:

Nothing done.

7th, 8th May:

Worked on 'follow' feature.

Added a edit profile function to user profile page.

9th May:

Started on 'follower' feature.

10th May:

Made connect/remove buttons.

Connect button to send request to respective user, which if accepted, adds current user to their connection list(manytomanyfield).

Yet to add accept and decline buttons on requests.

11th and 12th may:

Worked on comments, using a separate model. No multithreads yet.

13th and 14th May:

Nothing done.

15th May:

Created new field in comments model, called replies.

7th-9th June:

Created image uploading option for posts and profile pic.

10th-11th June:

Added roles for user: seeker, hirer, neither.

12th-13th June:

Worked on job feature, allows user to apply to jobs, create jobs if they are hirers.
